Variable Twin-Scroll Turbocharger (VGT)

The twin-scroll design divides the exhaust gases into two separate streams, allowing better spool-up and reduced turbo lag. The VGT adjusts the turbine vanes, providing optimal boost across different engine speeds, enhancing both responsiveness and fuel economy.

Common Rail Direct Injection

The high-pressure common rail system enables multiple injections per cycle, resulting in cleaner combustion, lower emissions, and quieter operation. Piezoelectric injectors improve spray precision, which is crucial for meeting Euro 5 emission standards.

Engine Block and Cylinder Head

- Materials: Aluminum alloy for lightweight construction
- Design: Overhead camshaft (OHC) with chain-driven timing
- Cylinder Head: Features integrated dual overhead camshafts, variable valve timing (VVT) via BMW's VANOS system

The aluminum construction reduces weight, contributing to better handling and fuel economy, while the VANOS system optimizes valve timing for various engine loads and speeds.

Emission Control Technologies

- Diesel Particulate Filter (DPF): Standard on most models to reduce soot emissions
- Selective Catalytic Reduction (SCR): Some models incorporate AdBlue injection for NOx reduction
- EGR (Exhaust Gas Recirculation): Helps lower NOx emissions by recirculating a portion of exhaust gases back into the intake

Performance and Driving Dynamics

The N47 engine balances performance with efficiency, making it suitable for both daily commuting and spirited driving.

Performance Highlights:
